SUMMARY

Full stack engineer with 3+ years building and running production Angular and Firebase applications, most recently as Technical Lead of a five-developer team. Works end to end: Angular frontends, Firestore data and business logic, Node.js Cloud Functions, third-party API integrations (Google Workspace, Gemini, client systems) and internal tooling such as ScriptRunner, a Node.js data-operations tool that became the team standard. Brings lead experience in architecture, mentoring and safer releases, with AI-assisted development as part of the daily workflow.

SKILLS

Frontend: Angular, TypeScript, JavaScript, RxJS, Angular Material, HTML, CSS

Backend & cloud: Node.js, Firebase Cloud Functions, Firebase Authentication, Firestore, REST APIs, Google Workspace APIs (Meet, Calendar), Gemini API

Data & tools: SQL, Git, GitHub, Postman, Python scripting, AI-assisted development (Claude Code)

Personal projects: Express.js, MongoDB, React, Redux (portfolio apps at zvdas.github.io)

Leadership: technical direction, architecture decisions, code review, mentoring, sprint planning (when delegated), test environment practices

EXPERIENCE

ThinkTac (Tactile Education Services Pvt Ltd), Bengaluru **Jun 2023 – Jul 2026**

Technical Lead, Jan 2025 – Jul 2026 • **Full Stack Developer**, Jun 2023 – Jan 2025 (promoted)

Engineering

- **Designed the multi-project architecture** that let several applications share Angular components, Firebase logic and features instead of duplicating them.
- Built and maintained Angular/Firebase applications end to end: Firestore data and business logic, Firebase Authentication and Node.js Cloud Functions.
- **Built ScriptRunner,** a modular Node.js tool for Firestore data operations that became the team standard: used by all five developers across multiple projects. Personally wrote 50-60 of its task scripts. It cached collection snapshots to avoid repeat reads and kept timestamped audit records, which the team used to manually reconcile and rerun partially failed batches.
- **Co-built** a dynamic contest system with the senior lead, replacing per-year collections and yearly code changes so contests ran annually without setup and new ones could be added freely.
- Integrated applications with client APIs so student evaluation and onboarding data moved between systems without re-entry; built meeting tools on Google Meet, Calendar, Events and Spaces APIs with Gemini-generated team summaries.

Leadership

- **Led a team of five developers:** set technical direction, made architecture decisions, and mentored developers through implementation blockers and production issues.
- **Reviewed junior developers' code** after peer review and before the manager's final review.
- **Introduced a separate Firebase testing environment:** researched, prototyped and rolled out a replica project with environment-specific configuration, so features were validated before they reached production.
- Ran sprint planning, task estimation and stakeholder coordination when delegated or in the manager's absence.

Angular Wiki (Maargvani IT Solutions Pvt Ltd), Remote • SDE Intern **Nov 2022 – May 2023**

- Built an Angular Material/RxJS drug-inventory module with real-time stock tracking, and automated prescription compliance reports with PDFMake.
- Wrote Python scripts (BeautifulSoup, Selenium) to collect pharmaceutical product data automatically.

EARLIER EXPERIENCE & EDUCATION

Operations and marketing roles in the automotive and engineering sectors (2016–2020), including Python web scraping for lead generation.

Bachelor's of Mechanical Engineering - Visvesvaraya Technological University, 2015
